LET MICROSPACE
EXAMINE YOUR NETWORK
REQUIREMENTS AND
DETERMINE IF A STANDALONE
OR HYBRID NETWORK CAN
PROVIDE AN ADVANTAGE TO
YOUR BUSINESS TODAY!

In addition to satellite communications, Microspace is emerging as a leader in enterprise wireless solutions with its **VELOCITY: CellCast** service.

As a stand-alone network, **CellCast** offers enterprise customers a network solution that is cost-effective, secure, and has dedicated bandwidth for content delivery. This standalone wireless network typically runs parallel to an enterprise's existing wide-area-network making it easy to implement and deploy across a large number of locations.

Network management and monitoring is a key feature of Microspace's **CellCast**. Our advanced monitoring and control provide a true enterprise level service with 24/7 visibility of your network. This means that sites with connectivity or hardware issues can be immediately identified and resolved from Microspace's award winning Network Operations Center.

Operated in a hybrid network, Cellcast can help merge the proven advantages of Microspace's multicast satellite delivery with the cost effectiveness and ease of use that wireless provides.

First, the fixed cost aspect of satellite multicast connectivity make it an excellent choice for delivering content to multiple locations especially those with requirements of frequent, large file deliveries. **CellCast** then helps bring the benefits of an easy to install, fully managed two-way network that is often required for delivery verification, advertising affidavits, and network monitoring.

Network management and monitoring is a key feature of Microspace's CellCast. Our advanced monitoring and control provide a true enterprise level service with 24/7 visibility of your network. This means that sites with connectivity or hardware issues can be immediately identified and

resolved from Microspace's award winning Network Operations Center.

In either a standalone network or a hybrid network Microspace's **CellCast** offering provides strong national 4G/LTE coverage and utilizes true enterprise grade equipment bundled into a reasonable per location monthly cost.
