

# Case Study: EHR

## **The Challenge**

As Doctor's offices move to EHR and cloud-based applications to meet requirements of today's medical system, the network becomes the critical link to the office doing business

## **The Solution**

Paired with an existing internet connection at the doctor's office, network reliability in most locations goes from 99% to 99.99%. The additional reliability and network management provided by CellCast reduces both downtime and workload at the offices and turns a typically unmanaged network environment into a fully managed network.

## **The Customer**

Customers ranging from single practices to groups with multiple practices have seen network availability jump and enhance the migration to EHR and other cloud-based applications.
