

Radio Broadcasting Services

MICROSPACE
We Connect.

Microspace's satellite services are a proven fit for radio programming distribution. No matter if the need is for real-time delivery to stations or store and forward applications. These services offer content providers easy-to-use and reliable means for distributing and managing content.

Microspace is owned and operated by Capitol Broadcasting Company in Raleigh, NC. Capitol Broadcasting's ownership and operation of radio properties over the decades gives Microspace a clear understanding of the needs and requirements of the radio industry.

Founded in its ability to securely, reliably, and cost-effectively distribute content, Microspace also provides the following benefits to radio broadcasters.

Delivering audio since 1988.

As an experienced radio broadcasting provider, the number of radio stations that currently receive programming from us exceeds 3,000!

Minimal Capital Expense

Unlike many satellite broadcasting options, Microspace handles all bandwidth, uplinking, and teleport infrastructure. This means you make your investments in programming—not a satellite-uplinking facility that requires personnel, utilities, etc. You simply deliver your content to the Microspace facility, and we take it from there.

Expanded Market Reach

Microspace currently offers services on SES 2 as well as SES 11, both of which are very desirable radio broadcasting neighborhoods. More than 3,000 radio stations currently receive programming from Microspace.

Experienced Provider

Microspace has been delivering audio since 1988. Microspace has worked closely with Christian radio programmers for years and has done the same with secular broadcasters. Microspace would be pleased to put that experience to work for your network.

Proven Solution

Microspace satellite content distribution is a proven technology for radio broadcasting and ensures high-quality sound and easy management of content through a secure, reliable, and cost-effective solution. We also understand the importance of infrastructure redundancy, so your network operates as designed today—and every day!

- 30 plus years of radio broadcasting experience and knowledge.
- Unmatched deployment, service, and support.
- 24/7 monitoring and support to ensure uninterrupted quality of service.
- Pioneers in audio broadcasting over satellite and IP.
- Continued consultation on our ever-growing suite of technology solutions.
- Secure facility with satellite hot-site and emergency power to provide 99.9% up-time.
