### Isn't it time for a more reliable backup plan?

Microspace's Network Operations Center provides enterprise-quality monitoring, control, and reporting 24/7/365.

Today, transactions, business-critical services, and customer interactions require connectivity. These needs turn network outages into severe and costly incidents.

Wireless network failover is a leading technology that cost-effectively minimizes the effect of network outages.

CellCast provides enterprise-class hardware and the most reliable 24/7/365 service available. While quality hardware is essential, it's our managed service that sets Microspace apart. Our advanced monitoring, control, and reporting provide real benefits across the CellCast network. 24/7 visibility of your CellCast network means that connectivity or hardware issues are identified immediately and resolved from Microspace's Network Operations Center.

## Pricing

CellCast provides strong, national, 4G/LTE coverage and utilizes enterprise-grade equipment bundled into a reasonable monthly cost per location.
